

1. Directed transport in equilibrium: A model study, A. Bhattacharyay, **Physica A** **391** (2012) **1111 - 1119**
2. Revisiting the LangerAmbegaokarMcCumberHalperin theory of resistive transitions in one-dimensional superconductors with exact solutions, Darshan G Joshi and A. Bhattacharyay, **J. Phys.: Condens. Matter** **23** (2011) **342203** (4pp)
3. Exploring modulated amplitudes in the resistive regime of a one-dimensional superconductor, A. Bhattacharyay, **Eur. Phys. J. B** **77**, **109113** (2010)
4. Volume exclusion and elasticity-driven directional transport: a model inspired by bacterium motility, A. Bhattacharyay, **J. Phys. A: Math. Theor.** **43** (2010) **315003** (11pp)
5. Parametric internal waves in a compressible fluid, Kausik S Das, Stephen W Morris and A Bhattacharyay, **Nonlinearity** **22** (2009) **29812990**
6. Self-assembly of sparsely distributed molecules: an efficient cluster algorithm, A. Bhattacharyay and Alessandro Troisi, **Chem. Phys. Lett.** **458**, **210** (2008)
7. Morphological changes of a superconducting phase in a mixed state with a normal current: a multiple scale analysis, A. Bhattacharyay, **J. Phys. A: Math. Theor.** **41**, **112001** (2008)
8. A simple model for dynamic phase transitions in cell spreading, A. Bhattacharyay, **J. Phys. A: Math. Theor.** **41**, **055101** (2008)
9. A theory for one dimensional asynchronous chemical wave, A. Bhattacharyay, **Journal of Physics A: Math. Theor.** **40**, **3721** (2007)
10. Simple solvation potential for coarse-grained models of proteins, A Bhattacharyay, A Trovato and F. Seno, **PROTEINS: Structure, Function, and Bio-informatics** **67**, **285** (2007)
11. Parametric Resonance near Hopf-Turing instability boundary, A. Bhattacharyay and J.K. Bhattacharjee, **Device Applications of Nonlinear Dynamics, Springer Complexity: 183**, (2006).
12. Local instabilities to nonlinear Turing and Hopf states, A. Bhattacharyay, **J. Phys. A: Math. Gen.** **39**, **8557** (2006)
13. Phase instabilities generated by parametric modulation in reaction diffusion systems, A. Bhattacharyay and J.K. Bhattacharjee, **Physics Letters A** **358** **121** (2006)
14. Modeling co evolution and sympatric speciation of flowers and pollinators, A. Bhattacharyay and B. Drossel, **Physica A** **345**, **159** (2005)
15. Transition to hexagonal patterns under the variation of intrinsic length scales of a reaction diffusion system, Julian Sienkiewicz and A. Bhattacharyay, **Eur. Phys. J B**, **40**, **73** (2004)
16. Spirals and Targets in reaction diffusion systems, A. Bhattacharyay, **Phys. Rev. E.** **64**, **016113** (2001)
17. Pattern formation in reaction diffusion systems: a Galerkin model, A. Bhattacharyay and J. K. Bhattacharjee, **Eur. Phys. J. B** **21**, **561** (2001)
18. Effect of parametric modulation on pattern formation in reaction diffusion systems, A. Bhattacharyay and J. K. Bhattacharjee, **Eur. Phys. J. B** **8**, **137** (1999)
19. A study of superconducting $(Y_{1-x}Ca_x)Ba_2Cu_3O_y$, S.K. Bandopadhyay, Pintu Sen, P. Barat, P. Mukherjee, A. Bhattacharyay, P. Rajasekar, P. Chakraborty, F. Caccavale, S. LoRusso, A. K. Ghosh and A. N. Basu, **Phys. Lett. A** **226**, **237** (1997)
20. Secondary-ion mass spectrometry and X-ray photoelectrons spectroscopy analysis of α -irradiated Bi-2212 superconductors, A. Bhattacharyay, P. Rajasekar, P. Chakraborty, S. K. Bandyopadhyay, P. Barat, Pintu Sen, F. Caccavale, S. Lo Russo, E. Knystautas and A. Adnot, **J. Phys. D: Appl. Phys.** **29** **2745** (1996)
